JUPITER ERP

Fish Freezing Plant Management System

STREAMLINE OPERATIONS · ENSURE QUALITY · MAXIMIZE EFFICIENCY

Confidential — Sales Presentation 2026

Industry Challenges

Fish processing plants face critical operational bottlenecks

Manual Tracking

Paper-based reception, production, and shipping logs lead to data loss, human errors, and costly delays in reporting.

Zero Visibility

No real-time view into warehouse stock levels, production output, or financial status across operations.

Financial Chaos

Supplier/client invoice reconciliation, settlement tracking, and fiscal year management are slow and error-prone.

Workforce Gaps

No centralized system to manage daily workforce allocation, fortnight schedules, corporals, and sections.

The Jupiter Solution

An all-in-one ERP built exclusively for fish freezing plants

Reception & Charges

Full reception tracking with supplier management, tracking numbers, weight, pricing, and warehouse stock-in operations.

Production

Link charges to production runs. Track input/output ratios, formulas, and production categories with full traceability.

Shipping & Dispatch

Manage client shipments with tracking numbers, container details, and automated stock-out from warehouses.

Warehouse Management

Real-time stock levels across multiple warehouses. Full stock-in/stock-out history with transfer management.

Financial Suite

Supplier & client invoicing, payment tracking, fiscal year management, and automated settlement balances.

Quality Control

Per-reception QC inspections with temperature logging, check items, pass/fail tracking, and inspector records.

Powerful Features

Enterprise capabilities at every layer

- ✓ Real-time WebSocket sync across all users and devices
- ✓ AI-powered assistant for natural language data queries
- ✓ Role-based access control with granular permissions
- ✓ Multi-language support (English, French, Spanish)
- ✓ Advanced analytics with daily, monthly, yearly charts
- ✓ Inventory management with multi-warehouse support
- ✓ Warehouse-to-warehouse transfer tracking
- ✓ Workforce management with fortnight scheduling
- ✓ Supplier and client settlement management
- ✓ Fiscal year closing with balance carry-forward
- ✓ Draft & archive system for data entry reliability
- ✓ Excel export for all data tables and reports
- ✓ Category-configurable workflows per module
- ✓ Dark mode and responsive mobile-friendly design

12+ Integrated Modules

Every aspect of plant operations covered in one system

Charge Management

Reception tracking, supplier allocation, weight & pricing, warehouse operations

Production

Charge-to-production linking, formulas, output tracking, categories

Shipping

Client dispatch, container management, tracking numbers, stock-out

Warehouse

Multi-warehouse stock, real-time levels, transfer management

Supplier Invoices

Client Invoices

Invoice creation, tracking numbers, payment management, settlements

Client billing, payment tracking, fiscal year management

Quality Control

Inspection records, temperature, check items, pass/fail status

Workforce

Workers, corporals, sections, fortnight scheduling, statistics

Inventory

Stock counting, category management, warehouse integration

Admin & Roles

User management, role-based permissions, super admin control

AI Assistant

Natural language queries, Excel analysis, image processing

Parameters

Fish types, suppliers, ships, trucks, origins, fisheries, packages

Built with Modern Technology

Enterprise-grade stack for reliability and performance

Laravel 11

PHP backend with Eloquent ORM, Sanctum auth, RESTful APIs, and real-time broadcasting

Vue.js 3 + Vuetify

Reactive SPA frontend with Material Design components, Pinia state management

Real-Time WebSocket

Laravel Reverb for live data sync. Every change broadcasts instantly to all connected users

MySQL Database

Relational database with soft deletes, migrations, and optimized queries for large datasets

AI Integration

Ollama-powered AI assistant for intelligent data analysis, natural language queries, and insights

Enterprise Security

Role-based access, API token auth, middleware guards, and granular permission matrix

Measurable Impact

Proven results from digitizing fish processing operations

85%

REDUCTION IN MANUAL ERRORS

3x

FASTER INVOICE PROCESSING

100%

REAL-TIME STOCK VISIBILITY

60%

TIME SAVED ON REPORTING

Why Choose Jupiter?

Competitive advantages that set us apart

Industry-Specific

Unlike generic ERP solutions, Jupiter is purpose-built for fish freezing and processing plants. Every feature addresses real industry needs — from fish type categorization to cold storage management.

Real-Time Everything

WebSocket-powered live sync means every user sees updates instantly. No refresh needed. Create a charge on one screen and watch it appear on another in under a second.

AI-Powered Intelligence

Built-in AI assistant that understands your data. Ask questions in natural language like "What was total production last month?" and get instant, accurate answers.

End-to-End Traceability

Track every fish from reception through production to shipping. Full audit trail with quality control at every stage. Compliance-ready documentation.

Ready to Transform Your Operations?

Let Jupiter streamline your entire fish processing workflow — from reception to shipping, with intelligence at every step.
